

Microsoft® Windows® DNA 2000

Windows® DNA is Microsoft's platform for building and deploying interoperable Web applications that get to market quickly – from high-traffic e-commerce Web sites to corporate intranets to enterprise supply chain integration. It's the result of the company's work on reinventing itself in order to meet the challenges of the Internet-enabled business environment.

The core of Windows DNA is Microsoft® Windows® 2000 Server, an operating system and application server with built-in Internet services that enable developers to focus on adding business value to their applications, including:

- | | |
|--------------------------------------|--------------------------|
| Internet Information Services™ (IIS) | COM+® component services |
| Data access | Message queuing |
| Indexing services | Security services |
| Network load balancing | XML Support |

Additional products in the Windows DNA solution include:
