

Debath Image Stego

This gif file contributed by Robert de Bath, contains a surprise inside. Mr. Bath writes:

"There are two tiny facts about GIF files and ZIP files you might like to know about: GIF files have their length defined at the start of the file; any bytes after are ignored. ZIP files have a table at the end; anything at the start of the file is ignored. The result is that a file can be both a GIF and a ZIP, just change the extension."
