 - Preparing Your Domain Controllers 179
 - Preparing Your Member Servers 180
 - Preparing Your Security Infrastructure 180
 - Preparing Your Clients 181
 - Windows 2000 Professional Upgrade Considerations 182
 - Preparing to Operate with Other Systems 183
 - Network Infrastructure Preparation Task List 184
- Chapter 7 Determining Network Connectivity Strategies 185**
 - Network Connectivity Overview 187
 - Sites 187
 - Remote Connectivity Methods 187
 - Internal Local Area Network Connectivity Within Sites 188
 - External Connectivity Within an Organization 190
 - Designing the Demilitarized Zone 190
 - Site Connectivity for an Organization 191
 - Remote Client Connectivity 192
 - Windows 2000 TCP/IP 192
 - New Features in the Windows 2000 TCP/IP Suite 193
 - Automatic Private IP Addressing Configuration 193
 - Large Window Support 193
 - Selective Acknowledgment 194
 - Improved Estimation of Round Trip Time 194
 - Planning Considerations for Microsoft TCP/IP 194
 - IP Address Classes 194
 - Subnet Masks and Custom Subnetting 195
 - TCP/IP and Windows Internet Name Service 196
 - WINS Design Considerations 196

Routing and Remote Access	197
New Features of Windows 2000 Routing and Remote Access Service	197
Remote Access Policy	199
Remote Access Design Considerations	199
VPN Security	200
Benefits of Virtual Private Networking	200
Point-to-Point Tunneling Protocol VPNs	200
L2TP over IPsec VPNs	201
L2TP Deployment Considerations	201
L2TP Examples	202
VPN Security with IPsec	203
Internet Authentication Service and Centralized Management	205
Multihoming	206
IP Routing Infrastructure	207
Static Routed Networks	207
RIP-for-IP Network Design	208
OSPF Network Design	209
IPX Routing Structure	213
IPX Network Design	214
AppleTalk Routing Structure	215
Multicast Support	215
Network Address Translation	216
Windows 2000 DHCP	217
Benefits of Using DHCP	218
New Features of Windows 2000 DHCP	218
Enhanced Server Reporting	218
Additional Scope Support	218
DHCP and DNS Integration	219
Unauthorized DHCP Server Detection	219
Dynamic Support for Bootstrap Protocol Clients	219
Read-Only Console Access to the DHCP Manager	220
Designing DHCP Into Your Network	220
Network Infrastructure Size	220
Windows 2000 Asynchronous Transfer Mode	222
Benefits of Using Windows 2000 ATM	222

Features of Windows 2000 ATM	222
ATM User Network Interface Call Manager	222
Updated NDIS and ATM Hardware Support	223
ATM LAN Emulation	223
IP/ATM	224
Multicast and Address Resolution Service	224
PPP/ATM	225
ATM Design Considerations	225
Quality of Service	227
Planning Task List for Networking Strategies	228
Chapter 8 Using Systems Management Server to Analyze Your Network Infrastructure	229
Analyzing Your Network Infrastructure	231
Using Systems Management Server	231
How Systems Management Server Can Expedite Windows 2000 Deployment	233
Systems Management Server 1.2 Differences	234
Collecting Inventory	235
Assessing the Current State of Your Hardware	235
Hardware Capacity	235
Hardware Compatibility	236
Using Systems Management Server Hardware Inventory	237
Assessing the Current State of Your Software	238
Using Inventory to Prepare Your Network Infrastructure	240
Reporting the Collected Data	240
Sample Systems Management Server Report of Windows 2000 Readiness	241
Using the Product Compliance Subsystem	242
Analyzing and Using the Collected Data	246
Monitoring Your Network	246
Ensuring Application Compatibility	248
Network Analysis Planning Task List	249
Additional Resources	250

Part 3 Active Directory Infrastructure	251
Chapter 9 Designing the Active Directory Structure	253
Overview of Active Directory	255
Primary Active Directory Features	255
Providing a Foundation for New Technologies	256
Planning for Active Directory	257
General Design Principles	260
Composing Your Active Directory Structure Plans	261
Creating a Forest Plan	261
Forest Planning Process	263
Determining the Number of Forests for Your Network	263
Creating a Single Forest Environment	263
Creating a Multiple-Forest Environment	263
Incremental Costs for an Additional Forest	264
Creating a Forest Change Control Policy	267
Schema Change Policy	267
Configuration Change Policy	268
Changing the Forest Plan After Deployment	268
Creating a Domain Plan	268
Domain Planning Process	270
Determining the Number of Domains in Each Forest	270
How Creating Domains Has Changed	271
When to Create More Than One Domain	271
Incremental Costs for an Additional Domain	279
Choosing a Forest Root Domain	281
Assigning DNS Names to Create a Domain Hierarchy	282
Arranging Domains into Trees	282
Domain Naming Recommendations	284
Domain Names and Computer Names	287
Planning DNS Server Deployment	287
Authority and Delegation in DNS	288
Domain Controller Locator System	289
DNS Server Requirements	290
Locate Authoritative Servers	290
Optimizing Authentication with Shortcut Trust Relationships	292

- Changing the Domain Plan After Deployment 293
 - Adding New Domains and Removing Existing Domains 293
 - Merging and Splitting Domains 294
 - Renaming Domains 294
- Creating an Organizational Unit Plan 295
 - OU Structure and Business Structure 296
 - OU Planning Process 297
 - Creating OUs to Delegate Administration 297
 - Modifying Access Control Lists 298
 - Deciding What OUs to Create 299
 - Delegation Procedures 300
 - Creating OUs to Hide Objects 304
 - Creating OUs for Group Policy 304
 - Changing the OU Plan After Deployment 305
- Creating a Site Topology Plan 305
 - Site Topology Planning Process 307
 - Defining Sites and Site Links 308
 - Creating Sites 308
 - Connecting Sites with Site Links 309
 - Placing Servers into Sites 312
 - Placing Additional Domain Controllers 312
 - Placing Global Catalog Servers 313
 - Placing DNS Servers 313
 - Changing the Site Topology After Deployment 315
- Planning Task List for Designing the Active Directory Structure 315
- Chapter 10 Determining Domain Migration Strategies 317**
- Starting the Migration Planning Process 319
 - Planning Process Phases 319
 - Determining Your Migration Roadmap 320
 - Migration Goals 321
 - Migration Concepts 322
 - Upgrading Clients and Servers 323
 - Domain Migration Considerations 324
 - Upgrade Decisions 324
 - Restructure Decisions 325
 - Application Compatibility 326
 - Interoperability Requirements 327
 - Disk Storage Requirements for Active Directory Objects 328

Planning Domain Upgrade	329
Determining Supported Upgrade Paths	330
Examining the Existing Domain Structure	331
Developing a Recovery Plan	332
Managing the Transition to the Windows 2000 Forest	333
Considering the Upgrade of Resource Domains	334
Determining a Strategy for Upgrading Domain Controllers	335
Windows 2000 Domain Modes	335
Upgrading the Windows NT PDC	338
PDC Emulation in Windows 2000	339
Access Control Components	340
Determining the Order for Upgrading Domains	342
Guidelines for Upgrading Account Domains	342
Guidelines for Upgrading Resource Domains	343
Child Domains and Trusts	343
Determining When to Move to Native Mode	347
Reasons for Continuing in Mixed Mode	347
Reasons for Moving to Native Mode	348
Examining Windows 2000 Groups	349
Local Groups	349
Domain Local Groups	349
Global Groups	349
Universal Groups	350
Nesting Groups	351
Group Membership Expansion	352
Effects of Upgrade on Groups	352
Using NetBIOS with Windows 2000	353
Transitioning to File Replication Service	354
LAN Manager Replication Service Process	354
The FRS Process	355
Maintaining LAN Manager Replication Service in a Mixed Environment	356
Using Routing and Remote Access Service in a Mixed Environment	358
Planning Domain Restructure	359
Determining the Reasons to Restructure Domains	359
Determining When to Restructure Domains	360

- Examining the Implications of Restructuring Domains 361
 - Moving Security Principals 361
 - Moving Users and Global Groups 367
 - Moving Profiles and SIDhistory 367
 - Moving Computers 368
 - Moving Member Servers 369
 - Establishing Trusts 370
 - Cloning Security Principals 370
- Domain Restructure Scenarios 370
 - Scenario #1: Migrating Users Incrementally from Windows NT to Windows 2000 370
 - Scenario #2: Consolidating a Resource Domain into an OU 372
- Domain Migration Tools 374
 - ClonePrincipal 375
 - Netdom 376
- Migration Planning Task List 377
- Chapter 11 Planning Distributed Security 379**
- Developing a Network Security Plan 381
 - Security Risks 382
 - Security Concepts 383
 - Security Model 383
 - Domain Model 383
 - Trust Management 384
 - Security Policy 384
 - Security Configuration and Analysis 384
